

Engineered to address corrosion issues in pool environments and provide easier hand rail and ladder installation.

Reduces Maintenance Costs & Cleaning Time

- Eliminates debris, corrosion, and heavy water deposits typically found lodged between the wedge anchor inside wall and assembly.
- Ideal for underwater installation of hand rails and ramp rails where rust bleeds can reduce water quality.

Offers Ease of Installation

- Ideal for removing and installing ladders or rails during pool deck maintenance, repairs and renovation.
- Eliminates alignment issues and the need for frequent bolt tightening common with wedge anchor assembly.

Sturdy and Aesthetic

- Built-in anchor compression ring applies even pressure on tubing decreasing potential damage to rail or ladder.
- Looks better. The escutcheonless, flush-mount design gives the rail and deck a finished look.
- Accommodates recommended ADA handrail and ladder tubing diameters.
