

# Pop Up Anchor

This Pop Up Anchor is designed for deck level pools. The post socket is set into the coping, a postslides into the socket and is locked into place. The anchor provides flexibility for all types of water sports.

- Fully constructed of 316 stainless steel
- Locks open for ease of attachment
- Great for pools with water polo and cross course swimming.
- Provides a clear aesthetic for used on leisure pools.
- If lane lines are not in use, the anchors are hidden on the deck and provide a pool wall free of anchors.
- Moving the anchor outside the pool provides flexibility for anchor locations relative to other courses specifically interferences between prime course anchor locations.
- Typical underwater anchors pull the rope down below water level, either near the anchor or at both ends of the pool. This Pop Up Anchor allows the lane ropes to be flush with the pool deck surface level for the entire length of the pool and significantly reducing the wave quelling.
